

About this preso:

The audience consists of members attending the (ICS)2 monthly meeting, with the annual focus on development

The typical attendee will be an engineer. Engineers may be skeptical or hostile to project management as a role, a field, or a topic

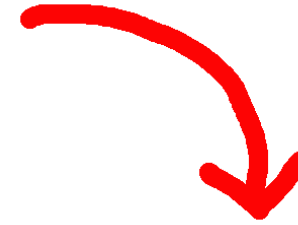

The presentation will start approximately at 8pm at night after approximately 1.5 hours of presentations (e.g. last)

The structure, layout, imagery, and most of all content are crafted around this initial position and these constraints.

If therefore: we're looking to keep it lightweight, entertaining, and jargon-free. The objective is to introduce just enough understanding of the benefits of a PM cert for a security professional to prompt a meaningful set of follow up questions informing an intelligent inquiry.

Provide follow up and next-step afterwards.

Why get a Project  
Management Certification?

There's some utility  
in it.

# WHAT UTILITY?
